CS290 – Web Development

Spring 2020 Semester

05/04/2020

Website Concept

I will be creating a website that is going to host information regarding my friend's Guitar Teaching business.

It will contain the following:

- Videos of him playing some songs (Either uploaded directly to his server, or embedded youtube links)
- A carousel on the front page that shows pictures of him teaching students, his band playing on stage, and other related images.
- Subpages:
    - About Me
    - Contact me
    - Blog
- Links to his related social media pages
- Link to download a video

The theme of the website will be "Rocker", to complement the fact that it is focused around teaching rock and roll music, so use of darker gray / black / green color scheme.

There will be a top bar with a menu to navigate through the subpages
